Because the Old English typeface is generally used for comparatively short lines, fonts made up according to the font schemes indicated above are relatively smaller than ordinary fonts.

The total number of matrices in the fonts as listed above is about 80% of the total number of matrices in an ordinary font of the same point size.

Fonts as priced above have generally proven more acceptable to users than large fonts at higher prices, as there is a sufficient number of matrices in the fonts to meet regular "short line" requirements. Where this face will be used for regular composition a double font or a font plus a sorts font should be ordered.
